

EMO RACK LIGHT

Constructed to occupy only 1U of rack space, the EMO Rack Light will illuminate the front panels of equipment housed below without diffusing into the surrounding area. The case slides in and out on runners and works on the 'fridge door' principle – the light goes out as the case clicks shut. The frame will stay closed even if the rack tips forward; when opened it will stay put at the position set. The EMO Rack Light incorporates 12 volt festoon lamps which are readily available throughout the world. Two levels of illumination can be selected.

Depth behind rack: 223mm.
Depth in front of rack when closed: 18mm.
Depth in front of rack when open: 120mm.
Mains supply: 220/240V (RK1) or 110V (RK1E) AC (captive cable).
