

EARLOOP WIRE

Flexible paper-covered wire, suitable for stiffening miniature microphone cables for accurate placing near the ear or cheek, or for making custom earloops. The wire will retain its shape once bent and can be re-bent without fracturing. The brown paper covering provides a neutral surface which could also be matched to skin tones with dye, felt-tip pen or make-up. Simply fix to the microphone cable with expandable or heat-shrink sleeves or with tape, and bend to shape round the ear.

Available in two cut-lengths with sealed ends for mic placement over the ear (150mm) or on the cheek (250mm), or as a 20 metre reel which may be cut to size, in which case the cut ends should be made safe by bending over or covering with tape.

54-201 EARLOOP WIRE Cut length 150mm (pack of 20)

54-202 EARLOOP WIRE Cut length 250mm (pack of 20)

54-203 EARLOOP WIRE 20 metre reel
