EDAC INSERTION AND RELEASE TOOL

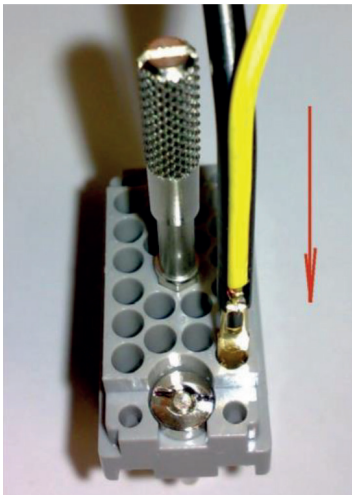

47-007 EDAC CRIMP CONTACT INSERTION TOOL
47-005 EDAC CONTACT REMOVAL TOOL

47-007 - EDAC Crimp contact insertion tool is a simple 'push fit' tool with a channel to accommodate the cable the contact is soldered/crimped on to.

To Insert contact simply apply the cable into the channel and orientate the fork of the contact into the desired position on the back of the Edac connector body.

Push contact into the body with the tool.

47-005 - EDAC Contact removal tool is a forked tool, (not unlike the forks on the EDAC contacts). A 'tongue' is engaged to eject the contact when the plunger of the tool is pressed.

To eject a contact, on the front of the EDAC connector body, orientate the forks of the tool 90 degrees to the forks of the contact to be removed. Insert tool onto contact and into the body of the connector until it stops.

Depress the plunger and the contact will eject from the connector body.
