90-3293 LYNX GREENMACHINE APP - MININOVA For 1x Greenmachine, adds CustomControl/SNMP/LYNX Remote Protocol

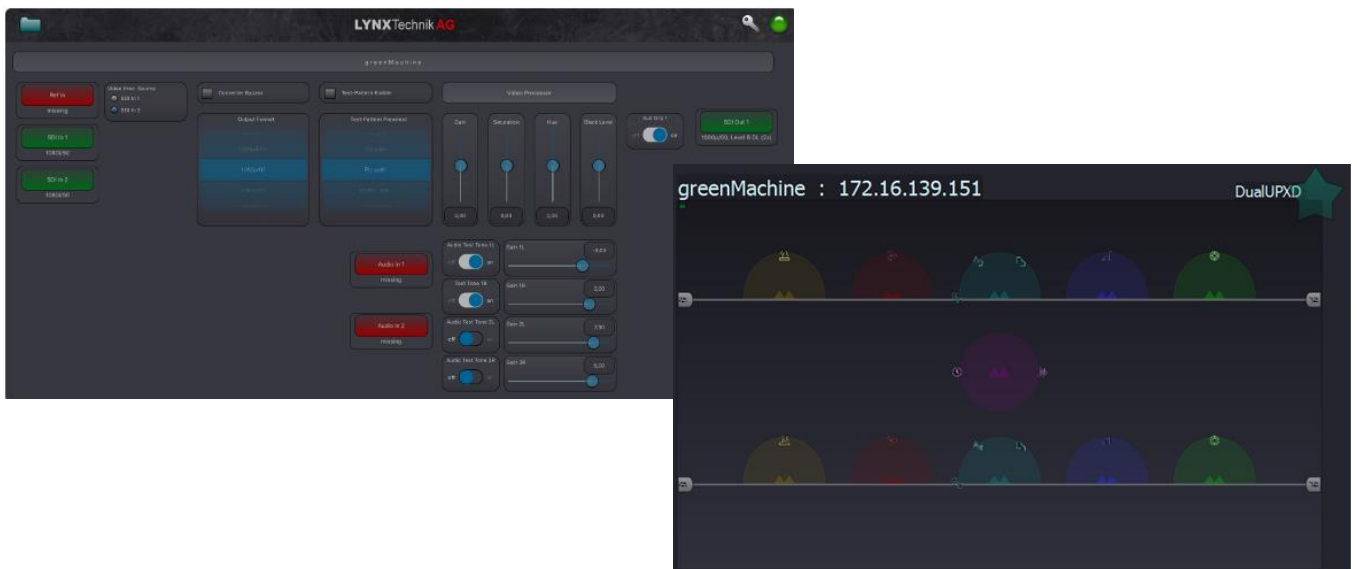

MININOVA APP

The MiniNova APP offers Remote Interfaces and CustomControl.

The LYNX remote control interface and SNMP (Simple Network Management Protocol) control and monitoring interface allow for control of the greenMachine from third party management systems. You can set any number of SNMP Trap Destination servers where trap messages issued by the greenMachine will be sent.

CustomControl allows the user to design customized control panels to fit their individual needs. The control panels are accessible from any computer within the network running the greenGUI or from any iOS device, (iPad or iPhone), with the APPolo Design APP, (see page 2 of this document).

The virtual customized control panels can comprise any parameter of your greenMachine and can be used for monitoring and/or controlling. The controls are fully customizable, allowing the user to set their own labels for the controls, the values and limit the range of possible values.

A greenMachine with a MiniNova APP (left picture) can be turned into a SuperNova (picture on the right). CustomControl designs can then include controls for the parameters of all greenMachines with a MiniNova APP inside the greenUniverse.

Unlike other greenMachine APPs Mininova is not available on test/trial basis and therefore must be purchased prior to using.

Controlling a greenMachine through APPolo Design App from an iOS device, (iPad or iPhone)

APPolo Design is part of the LYNX Technik APPolo Control System and turns your iOS device into a remote control interface for the greenMachine and Series 5000 modular products. Designed and built to be used with the MiniNova APP in greenMachine, virtual control interfaces can be used to control any greenMachine in the network.

APPolo Design is the simplest and most flexible way to remote control and monitor a greenMachine and LYNX Technik Series 5000 Modular products.

APPolo Design APP is available to download from the Apple AppStore.

NOTE: APPoloDesign will not work to control devices, which are without the Mini Nova APP.
