

# Voice Technologies VT5000 Shotgun Microphone

includes...

 **Rycote**<sup>®</sup>

High Quality  
Foam  
Windscreen

## Lightweight, short but big in performance.

The VT5000 is an extremely lightweight, short shotgun microphone that has been tailored to the tonal sound of our renowned VT500 Lavalier Series. Due to its tight directional pattern, ambient noise is greatly minimized from the sides and behind the microphone producing clear and smooth voice pickup. It is designed for a wide range of recording applications including video camera-mounting for broadcast, ENG, EFP, sports documentaries, video, film, or even for studio recordings.

At only 78g (2.75 oz) and with a length of 205mm (8.07"), the VT5000 is among the lightest and shortest shotgun microphones on the market.

The Voice Technologies VT5000 includes a high-quality foam windscreen by Rycote.

**Area of application:** Video camera-mounting for broadcast, ENG, EFP, sports, documentaries, video, film, or even for studio recordings
