Trademarks
Wharton Electronics and 4000x, 4000E, 4000N, 4000NE and 4000EP are trademarks of Wharton Electronics Ltd. MOBALine is a registered trademark of Moser Baer AG. All other trademarks and registered trademarks are property of their respective owners.

## Statutory Notices

Warning - To prevent fire or shock hazard, do not expose the internals of the unit to rain or moisture.
Disposal of Lithium battery - This equipment has a built-in Lithium (Li) battery which in normal operation should have a service life greater than 10 years.

CAUTION - Danger of explosion if battery is incorrectly replaced.

Replace only with the same or equivalent type recommended by the manufacturer. Dispose of used batteries according to the manufacturer's instructions. You can return your unwanted Lithium batteries to the manufacturer or their agent. Note: In some areas disposal of Lithium batteries in household or business waste may be prohibited. Caution: Do not handle damaged or leaking Lithium batteries. To remove battery at end of product's life, unscrew backplate from case body to remove (top rail in case of double sided unit), locate Lithium battery on main driver board and remove. Battery should be disposed of as per local legislations.

End of Life - At the end of product's life, do not dispose of your device in the regular domestic/household waste. Return your device to your supplier who will dispose of it correctly.

Electromagnetic Compatibility \& Safety

## For Customers in Europe:

4000x series digital clocks, when used in accordance with our recommendations, complies with the European Community Electromagnetic Compatibility Directive 2004/108/EC and the European Community Low Voltage Directive 2006/95/EC and conforms to the following standards:

> EN 61000-6-1

EN 61000-6-3
EN 60950

## For Customers in the USA

The equipment has been designed to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. The equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try and correct the interference by one or more of the following measures:

- $\quad$ Re-orientate or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

You are cautioned that any changes or modifications not expressly approved in this manual could void your authority to operate this equipment.

## Warranty

The 4000x series digital clocks are fully guaranteed, on a return to works basis, against failure due to faulty parts or workmanship for 24 months from date of purchase. In the event of failure, either within or outside the warranty period, please pack the unit with care and return to the manufacturer, or their agent, for examination and repair.
In no event shall the manufacturer, or their agent be liable for any direct, incidental or consequential damages of any nature, or losses or expenses resulting from any defective product or the use of any product, irrespective of whether the manufacturer, or their agent, has advance notice of the possibility of such damages.

## Product Development

In the interests of improving design, operational function, and/or reliability, Wharton Electronics Ltd reserves the right to make changes to the products described in this document without notice.

This manual version 2.2 applies to units operating with software version 01.DD or later, unless otherwise stated.

## 4000x Series Digital Clock Operating and Installation Instructions

## 1 - Introduction

The 4000x series of digital clocks provide a precise and elegant display of time using red, green, yellow/amber, blue or white LED display characters with an unrivalled flexibility of operation in the most demanding timekeeping and stopwatch applications.
All units can be used in stand-alone applications, while $4000 \mathrm{~N} \& 4000 \mathrm{NE}$ products are primarily intended to be synchronised via NTP/SNTP from a remote time server located on the customers TCP/IP Ethernet network. 4000NE \& 4000E units can be configured for over 30 different types of secondary clock operation, included GPS, MSF or DCF radio time code synchronisation when used with the appropriate option module or radio receiver. The 4000EP version is intended to synchronise from MOBALine, Active DCF or 24 V alternate polarity impulses.

The 4000NE \& 4000E series digital clocks can display static time display; alternating time and date or alternating time and temperature; or alternating time, date and temperature. (Please note, temperature display only available on 4000E and 4000NE series units and requires connection of 406 temperature sensor.)

All of the digital clocks also have the ability to operate as a multi-range programmable stopwatch using supplied infrared remote control or, for 4000NE and 4000E units only, using an external stopwatch control panel or user supplied voltage free contact closure or switch.

## Simple Operation

All 4000x digital clocks are supplied with an infrared remote control to allow for easy setup and control of stopwatch functions. The units are simple to configure and will automatically adjust themselves for seasonal daylight savings time changes (as required).

## Operating Features

The 4000x series digital clock displays offer the following operating features.

- 83 preset location codes - The digital clock may be user programmed to display the time in one of 83 different preset locations.
- User programmable time zone - To allow for custom time zones or future changes in legislation
- Automatic or manual brightness - The display may be programmed to one of seven preset display brightness levels. Alternatively, the unit may be programmed for automatic display brightness where the display illumination level is reduced as the ambient light level decreases -
- Multi-function Stopwatch - The display can be configured to operate as a count-up or count-down stopwatch with a the display freely switchable between operating modes or fixed to either stopwatch or clock display.

# 4000x Series Digital Clock <br> Operating and Installation Instructions 

## Installation and Operation

## Power Supply Connection

The 4000x series digital clocks are fitted with either universal mains power supplies (enabling operation at voltages from 100 to 240 V AC $50 / 60 \mathrm{~Hz}$ without adjustment), low voltage DC power supplies or Power-over-Ethernet (PoE) power supplies, as specified at time of order.
Units are supplied with a 2 m mains cable preterminated with a UK style moulded plug (units for supply to the USA or Canada are supplied with a 2 m captive mains cable preterminated with a US style moulded plug).

## A connection to the earth line must be made to ensure safe operation and compliance with EMC regulations.

To ensure conformance with EN60950:
A. For installations where the 4000 x series digital clock is to be permanently connected into the mains power circuit, a readily accessible disconnect device should be incorporated in the fixed wiring.
B. For installations where the 4000 x series digital clock is to be plugged into the mains power circuit, a socketed outlet should be installed near the equipment and should be easily accessible.

All installation work should be performed in accordance with current Building Regulations and the Seventeenth Edition of the IEE Wiring Regulations, or equivalent local standard.
The power supply is fitted with an internal fuse. In case of fault the fuse should only be replaced with a fuse of the same rating, by a suitably qualified engineer after disconnection from the mains power supply and correction of the fault condition.

## Remote Control and Rear Switches

In addition to the rear setting switches, the 4000x series digital clock displays are supplied with an Infrared Remote Control to allow for easy setting of the unit.

1 'Up' - Used to navigate up through setting menus or access Function Menu when time is displayed.
2 ' + ' - Used to increment setting options.
$3 \quad$ ' - ' - Used to decrement setting options.
4 'Down' - Used to navigate down through setting menus.
5 'Menu' - Used to access Function Menu on clock. 6 'Exit' - Used to exit from any clock setting menu to normal clock display.
7 'Start/Stop' - Only used in Stopwatch Mode. See Section 9 for further information
8 'Hold/Reset' - Only used in Stopwatch Mode. See Section 9 for further information.
9 'Clock Mode' - Used to place clock into Clock Mode. See Section 9 for further information.
10 'Stopwatch Mode' - Used to display Stopwatch Mode. See Section 9 for further information

## 4000x Series Digital Clock <br> Operating and Installation Instructions

## 3 - Function Programming

The 4000x digital clocks have a user friendly programming interface based around a series of function menus, accessed using the supplied Infrared remote control or four switches located on the right hand rear of the display. The function menus may be accessed as detailed in the drawing below. This drawing illustrates the menu display for both seven segment and dot matrix display units.

Seven Segment Display

Dot Matrix Display

Function 'Synchronisation Setting Mode'. See page 6-1. Press 'Up' to enter 'Synchronisation Setting Mode' or press '+' to move to next setting.

The other function menu options are detailed in the table below.

| Function Menu <br> Options | Function | Section |
| :---: | :--- | :---: |
| Ti | Time and Date Setup - Manually set time and date on unit. | 4 |
| Lo | Location Code Setup - Select UTC offset and seasonal time change rules. | 5 |
| Sy | Synchronisation Mode Setup - Select synchronisation mode. | 7 |
| Nt | Ethernet Setup - Select network settings. (N \& NE units) | 6 |
| Cl or Di | Calendar / Date format Setup - Select calendar/date format. | 8 |
| SS | Stopwatch Setup - Select stopwatch settings. | 9 |
| Et | External Interface Setup - Select operating mode of external interface. (E \& NE units) | 10 |
| St | System Setup - Select brightness level (br) and 12/24 hour display format. | 11 |

## 4000x Series Digital Clock <br> Operating and Installation Instructions

## 4 - Time and Date Setting

The 4000x series digital clocks can be configured to automatically adjust for daylight savings changes, however if the unit is run in Standalone mode of operation (i.e. unsynchronised), you may occasionally

need to manually adjust the time. Please refer to the diagram below for further information.

Function 'Time Setting Mode'. Press 'Up' to enter 'Time Setting Mode' and set the seconds count.

Seconds Setting Mode. Press ' + ' to increment seconds, '-' to set to zero. Press 'Up' to set minutes count. Minutes Setting Mode. Press ' + ' or ' - ' to increment or decrement minutes. Press 'Up' to set the hours count. Complete time setting process detailed in table below.
$\left.\begin{array}{lllll}\begin{array}{lll}\text { Fu Ti } \\ \text { Function }\end{array} & \begin{array}{l}\text { Time and Date settings } \\ \text { Display Type }\end{array} & \text { Description } \\ \text { hh:mm:ss }\end{array}\right)$

## 4000x Series Digital Clock Operating and Installation Instructions

## 5 - Location Setup

The 4000x series digital clocks provide advanced time zone functionality where the display may be user programmed to automatically indicate the time in one of 83 preset locations. Incorporating 'Set Once' technology, the 4000x series digital clock displays will automatically calculate future seasonal time changes for all preset time location code settings.

## Setting the Location

If you wish to alter the time zone displayed on your 4000x series digital clock, rather than manually adjusting the time, the location code should be adjusted as detailed in the table below.

The location settings are accessed from the function menu as detailed in section 3.

| Fu Lo | Location settings |  |  |  |
| :--- | :--- | :--- | :--- | :--- |
| Function | Display Type |  | Description | 'Up' button <br> function |
|  | hh:mm (4200) | hh:mm:ss <br> $(\mathbf{4 0 1 0})$ | Loc 01 | Set time zone location code. |

The table below details the time displayed for each location code.

| Time Zone Locations |  |  |  |
| :---: | :---: | :---: | :---: |
| Code | Time Zone / City / Location | UTC Offset | Seasonal Time Change |
| 00 | UTC+0 (ZULU) UTC, GMT | 0 | No |

## User Programmable Time Zone

To allow for custom time zones and future changes in legislation, setting the unit to location code 98 enables the user to program a 6 byte code representing the local time offset and seasonal time change-over dates for that zone. Please contact your local distributor for further details of this function.

## 4000x Series Digital Clock <br> Operating and Installation Instructions

## 6 - Network Setup

The 4000N and 4000NE series digital clocks are fitted with a 10/100Base-T Ethernet network interface and designed to synchronise to a remote NTP (Network Time Protocol) time server across a TCP/IP computer network.
Upon initial installation, the unit IP address, subnet mask, gateway and NTP time server IP address shall be automatically assigned by a DHCP server (if available). Alternatively, the unit IP address, subnet mask, gateway and NTP time server IP address can be statically assigned.
The table below details the available network parameters. Please contact your network administrator for details of network configuration \& addresses that will allow the clocks to be used on your network.

| Fu Nt | Network settings |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Function | Display Type |  | Description | 'Up' button function |
|  | hh:mm (4200) | $\begin{aligned} & \text { hh:mm:ss } \\ & \text { (4010) } \end{aligned}$ |  |  |
| DHCP Setting | dh Fu | dh Full | Full DHCP mode. Automatic assignment of IP, Subnet and Gateway by customers DHCP server. Automatic assignment of NTP servers via DHCP option 42. | Exit to Time display |
|  | dh Ye | dh Yes | DHCP mode. Automatic assignment of IP, Subnet and Gateway by customers DHCP server. User setting of NTP server addresses. | Exit to Time display |
|  | dh No | dh No | Static assignment of IP, Subnet and Gateway addresses by user. User setting of NTP server addresses. | Select IP Byte 1 |

## 4000x Series Digital Clock <br> Operating and Installation Instructions

## 7 - Synchronisation Setup

The 4000x series digital clocks have a standalone accuracy of better than $0.1 \mathrm{sec} /$ day @ 20-25ㅇ. . However, for applications where an increased level of accuracy is required, units may be synchronised to a range of different synchronisation methods.
The synchronisation settings are accessed from the function menu as detailed in section 3 .

## 4000x Series Digital Clock <br> Operating and Installation Instructions

## NTP Client

4000N \& 4000NE products are primarily intended to be synchronised via NTP/SNTP from a remote time server located on the customers TCP/IP Ethernet network. Up to to 4 remote NTP time servers can be specified either fully automatically using DHCP option 42 configured on your company's DHCP server or manually by the user.

If manual configuration of the NTP time servers is required, it the first server IPv4 address can be programmed using the IR remote or clock switches as detailed below. Up to 3 more time server addresses can be programmed into the digital clock using the cMon clock management software.

## Clock configuration

1 Press 'Menu' or 'Up' button to access clock settings menu.
2 Press ' + ' button until ' Fu Sy' is displayed
3 Press 'Up' button to access Synchronisation menu.
4 Press ' + ' button until 'NTP' is displayed.
5 Press 'Up' button.
If Clock is set to 'Full DHCP' mode the display will show DHCP and the 'Up' arrow should be pressed again to return to the time display.
If clock is to 'DHCP' or 'Static' modes the 4 bytes of the first NTP time server address can be programmed in same manner as detailed for the IP address in Section 7.

6 Press ' + ' \& ' - ' buttons until each of the 4 address bytes is displayed.
7 Press 'Up' to return to time display

## GPS and GLONASS Synchronisation

The 4000E and 4000NE series digital clocks can be configured to synchronise to GPS or GLONASS time code when connected to either the 488HS3 GPS Receiver or 488HS3-GLONASS Receiver (supplied separately) as follows.

## Clock configuration

1 Press 'Menu' or 'Up' button to access clock settings menu.

2 Press ' + ' button until ' $F u$ Sy' is displayed
3 Press 'Up' button to access Synchronisation menu.

4 Press ' + ' button until 'GPS' is displayed.

5 Press 'Up' button to select GPS synchronisation.

The status of the GPS/GLONASS receiver is shown via the three LEDs on the receiver as follows.

## 488HS3 GPS receiver status LEDs

| Red LED | On | Receiver is powered |
| :--- | :--- | :--- |
| Yellow LED | Flash | Receiver is searching for satellites <br>  <br> On |
| Green LED | Flash | GPS receiver locked. |

## 4000x Series Digital Clock Operating and Installation Instructions

## 48x0 and w482 Time Code Synchronisation

 The $4000 \mathrm{E}, 4000 \mathrm{NE}$ and 4000EP series digital clocks can be configured to synchronise to $48 \times 0$ or w482 time code from a suitable master clock (supplied separately) as follows.

## DCF and MSF Radio Time Code Synchronisation

The 4000E and 4000NE series digital clocks can be configured to synchronise to DCF or MSF radio time code when connected to either the 484.02 MSF Radio Receiver or 484.03 DCF Radio Receiver (supplied separately) as follows..

## MOBALine Time Code Synchronisation

 The 4000E, 4000NE and 4000EP series digital clocks can be configured to synchronise to MOBALine time code from a suitable master clock (supplied separately) as follows.

## Clock configuration

1 Press 'Menu' or 'Up' button to access clock settings menu.

2 Press ' + ' button until 'Fu Sy' is displayed

3 Press 'Up’ button to access Synchronisation menu.

4 Press ' + ' button until either ' $48 \times 0$ ' or ' 482 ' is displayed.

5 Press 'Up' button to enter required w482 time zone number (not required for $48 \times 0$ ).

6 Press ' + ' button until required w482 time zone number is selected (not required for $48 \times 0$ ).

7 Press 'Up' button to select either $48 \times 0$ or w482 synchronisation.

## Clock configuration

1 Press 'Menu' or 'Up' button to access clock settings menu.

2 Press ' + ' button until 'Fu Sy' is displayed

3 Press 'Up’ button to access Synchronisation menu.

4 Press ' + ' button until either 'DCF' or 'MSF' is displayed.

5 Press 'Up' button to select DCF or MSF synchronisation.

## Clock configuration

1 Press 'Menu' or 'Up' button to access clock settings menu.

2 Press ' + ' button until 'Fu Sy' is displayed

3 Press 'Up' button to access Synchronisation menu.

Press ' + ' button until 'MOBA' is displayed.

5 Press 'Up' button to set required MOBALine/UTC offset.

6 Press '+' button until required MOBALine/UTC offset is displayed in minutes (positive or negative offsets can be set).

7 Press 'Up' button to select MOBALine synchronisation.

## 24V Alternate Polarity Impulse Synchronisation

The 4000EP series digital clocks can be configured to synchronise to 24 V alternate polarity impulses from a suitable master clock (supplied separately) as follows.

## Clock configuration

1 Press 'Menu' or 'Up' button to access clock settings menu.

2 Press ' + ' button until 'Fu Sy' is displayed

3 Press 'Up’ button to access Synchronisation menu.

4 Press ' + ' button until 'IMP' is displayed.

5 Press 'Up' button to set required impulse type.
6 Press ' + ' button until required impulse type is displayed.

7 Press 'Up' button to select Impulse synchronisation.
8 Set Impulse time on clock as per Time Setting instructions.

## 8a - Display Setup

4010 \& 4200 digital clocks can be configured to display time of day, alternating time \& date and continuous date in a number of different display formats as detailed in the table below.

| Fu Di |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Function | Display |  | Description | 'Up' button function |
|  | hh:mm (4200) | $\begin{aligned} & \text { hh:mm:ss } \\ & \text { (4010) } \end{aligned}$ |  |  |
| Display Style | ti | ds ti | Standard time display. | Exit to Time display |
|  | gb | ds $\mathbf{g b}$ | Alternating time and date in ddmmyy (4010) or ddmm (4200) format. | Display hold time |
|  | us | ds us | Alternating time and date in mmddyy (4010) or mmdd (4200) format. | Display hold time |
|  | eu | ds eu | Alternating time and date in yymmdd (4010) or yymm (4200) format. | Display hold time |
|  | cgb | ds cgb | Continuous date in ddmmyy (4010) or ddmm (4200) format. | Exit to Time display |
|  | cus | ds cus | Continuous date in mmddyy (4010) or mmdd (4200) format. | Exit to Time display |
|  | ceu | ds ceu | Continuous date in yymmdd (4010) or yymm (4200) format. | Exit to Time display |
|  | jday | ds jday | Continuous day of year. | Exit to Time display |
| Display hold | dh $\mathbf{x x}$ | dh $\mathbf{x x}$ | Number of seconds that clock holds between alternatin display formats - between 1 and 20 seconds. | Exit to Time display |

## 4000x Series Digital Clock <br> Operating and Installation Instructions

## 8b - Calendar Setup

The $45 x 0 x$ series digital calendar clocks either dot matrix alpha-numeric date displays or seven segment numeric date displays. Each of the two display type allow for different date formats as follows.
The $45 \times 0 x$ series dot matrix style digital calendar clocks can be configured to display the date 6 different formats and in one of 22 different languages.

| FuCl | Calendar Setup |  |  | Up' button function |
| :---: | :---: | :---: | :---: | :---: |
| Function |  | Format | Description |  |
| Calendar Hold Time | ch $\mathbf{x x}$ |  | Calendar hold time 00-30 seconds. If set to 00 only display first calendar mode | Calendar 1 Mode |
| Calendar 1 Mode | M1 01 | THU 26 JUN | Alpha-numeric display of calendar | Calendar 1 Lang. |
|  | M1 02 | 17726 JUN | Julian day of year and calendar | Calendar 1 Lang. |

## 4000x Series Digital Clock <br> Operating and Installation Instructions

## 9 - Stopwatch Setup

The 4000x series digital clocks can be configured to operate as a multi function stopwatch controlled via the supplied IR remote control. The clock can be switched between clock and stopwatch modes by pressing the 'Clock' and 'S/W' buttons respectively. The 'Start/Stop' and Hold/Reset' buttons will control the stopwatch operation as per the below table.
4011x, 4012x, 4201x and 4202x clock and stopwatch displays do not use 'Clock' and 'S/W' buttons. See model specific documentation for further details.

Fu SS Stopwatch settings

## 10 - External interface setup

The external interface of the $4000 x$ series clocks can be used for connection of a 406 temperature (supplied separately) or to provide a Local Master synchronisation output..
$\left.\begin{array}{lllll}\text { Fu Et } & \text { External Interface Setup } & & \\ \text { Function } & \text { Display Type } & \text { Description } & \text { 'Up' button } \\ \text { fh:mm } \\ \text { function }\end{array}\right\}$

## 11 - System setup

The system setup menu contains general setup options for the 4000x series digital clock displays as follows.

| Fu St <br> Function | System Setup |  |  | 'Up' button function |
| :---: | :---: | :---: | :---: | :---: |
|  | Display Type |  | Description |  |
|  | hh:mm (4200) | hh:mm:ss (4010) |  |  |
| Display Brightness | $\mathrm{Br} A$ | Br A | Display brightness can be automatically set (A) or set to one of seven fixed levels (1-7) | Select time format |
| Time Format | 24 hr | 24 hr | Display time in either 24 hour (military) or 12 hour format. | Display F/W version |
| Firmware version | 01 dd | 01 dd | Firmware version clock is running. | Display B/L version |
| Bootloader version | 00 62 | 0062 | Bootloader version clock is running. | Factory mode. |
| Factory mode | Eg 00 | Eg 00 | Factory mode, not user accessible | Exit to time display. |

## 12 - Clock Status Display

The synchronisation status of the 4000x series digital clocks is confirmed by the status of the Colon LEDs. If the Colon LEDs are flashing, the unit is unsynchronised. When the clock successfully synchronises to the selected time source, the Colon LEDs remain statically illuminated.

From the time display, the ' + ' button can be used to scroll through the following information:

[^0]
[^0]:    Time $>$ Date $>$ Brightness $>$ Network mode $>$ IP address $>$ Subnet mask $>$ Gateway address $>$ MAC address
